Urban Biodiversity Monitoring Locations

2019 - 2020

The City of St. Louis is developing an urban biodiversity inventory, and aspires to have habitat in six urban locations monitored for the presence or absence of surrogate species. All species observations collected via the free iNaturalist app are useful and relevant for this purpose, but the priority focus will be on data relating to a set of species selected as collective indicators of high urban biodiversity. To learn more about the surrogate species, contact the Office of Sustainability at StLouis-mo.gov/UVE.

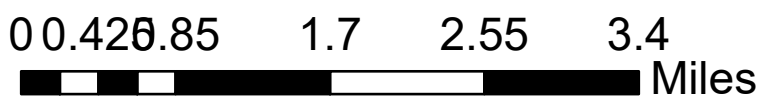

Legend

- Ⓒ Calvary Cemetery Prairie
- Ⓕ Forest Park
- Ⓖ Gateway Arch National Park
- ⓪ O'Fallon Park
- Ⓡ River Des Peres Park/Wilmore Park
- Ⓣ Tower Grove Park
